

**APPENDIX III**  
**Serial No. 10/558,096**

**ABSTRACT OF THE DISCLOSURE**

In a human-machine interface for a telediagnosis system, data conversion, data completion, data preparation and computation of a diagnosis result ensue in a central diagnosis center provided in the form of a call center. The computed diagnosis result is displayed in completed form on a display screen, thereby enabling a selected assistant in the call center to view the result.
